BISNODE CERTIFICATE OF CREDIT RATING EXCELLENCE

The Bisnode credit rating certificate of excellence has been a widely recognised proof of an above-average company in the world of business. The certificate is valid for 12 months after the date of issue and is based on current information on business operations and the financial results from previous years. Tens of statistically significant variables, tested formulas on the basis of financial data, blockades, payment habits and lawsuits demonstrate safety, competitiveness, sustainability, stability, excellence and reliability of business entities. The better the certificate of business excellence, the greater the trust and reputation on the market.

Credit rating excellence = safety, excellence and effectiveness

Business entities can consolidate their reputation and gain additional trust in local and foreign business environment with internationally recognised certification practices. The Bisnode credit rating certificate of excellence is not just an illustration of the company's financial status in the **past year**, but also includes a wide range of **statistically relevant** and **current data on trends**, which use advanced analytical algorithms to reflect the probability of company's success/failure.

Certificates for the following 12 months predict **protection** against deletions or insolvency, compulsory settlement or liquidation, deletion from the business register and blocking of the entity's transaction accounts. Business excellence is also a message for business environment on **good** financial results, **sustainability** and **stability**, since it is a proof of continuous flawless operations, as well as **excellence** and **reliability** due to good payment discipline.

Tradition and professionalism: four modules

The Bisnode Group, a partner of the international Dun & Bradstreet network, has a long tradition of awarding certificates of business excellence in twelve European countries. The evaluation module consists of four modules:

Demographics module. It includes profile data, such as age, region, municipality, type and activity of the subject (LLC, PLC, sole proprietorship or cooperative), number of employees, lawsuits and the number of opened and closed accounts in the past year.

Financial module. It covers the items of the balance sheet, profit and loss account and selected indicators and their trends as variables, which are statistically significant for company's operations and predictions of losses.

Payment habits. It takes into account and detects the time-weighted payment discipline, share of advance payments and share of longer payment delays according to the information supplied by the partners of the company.

Blocking. This module includes the data on blocking for the past 365 days and automatically eliminates business entities upon detection.

Balance sheet: optimality

These indicators represent the central part of the credit rating system, which is the basis for the **rating classes** (A, AA, AAA). The key factors also include the trends during the year, as the model detects **fluctuations**, which are alleviated with increased efficiency and reduced risk by the best business entities. Accordingly, the certificate of business excellence also guarantees **optimality of business**.

Graphic analysis

Participation rate of liabilities

The participation rate of liabilities tells us the amount of assets financed by foreign capital. The higher the ratio, the better the company uses foreign sources for its financing (current and non-current liabilities). As a rule, foreign financing is cheaper than financing from own resources.

Calculation ratios

$$\text{Participation rate of liabilities} = \frac{\text{Financial and operating liabilities}}{\text{Liabilities}} \times 100$$

Liquidity ratio

The liquidity ratio tells us the coverage of current liabilities by current assets. The higher the value of the ratio, the easier it is for the company to settle its current liabilities. Liquidity is the company's ability to have at its disposal, within a short period of time, adequate liquid assets for timely payment of due liabilities.

Calculation ratios

$$\text{Liquidity ratio (Quick ratio)} = \frac{\text{Current assets}}{\text{Current liabilities}}$$

Assets turnover ratio

The ratio measures the share of total revenues in assets and tells us the amount of total revenues generated by the company with the available assets. The higher the value of the ratio, the better the performance of the company and the shorter its turnover. The shorter the turnover, the better the liquidity of the company and the smaller the probability that it would experience liquidity problems. A shorter turnover means that assets require less time to be converted from non-liquid to liquid state.

Calculation ratios

$$\text{Assets turnover ratio} = \frac{\text{Total revenues (Sales)}}{(\text{Assets last year} + \text{Assets previous year}) / 2}$$

Statistics

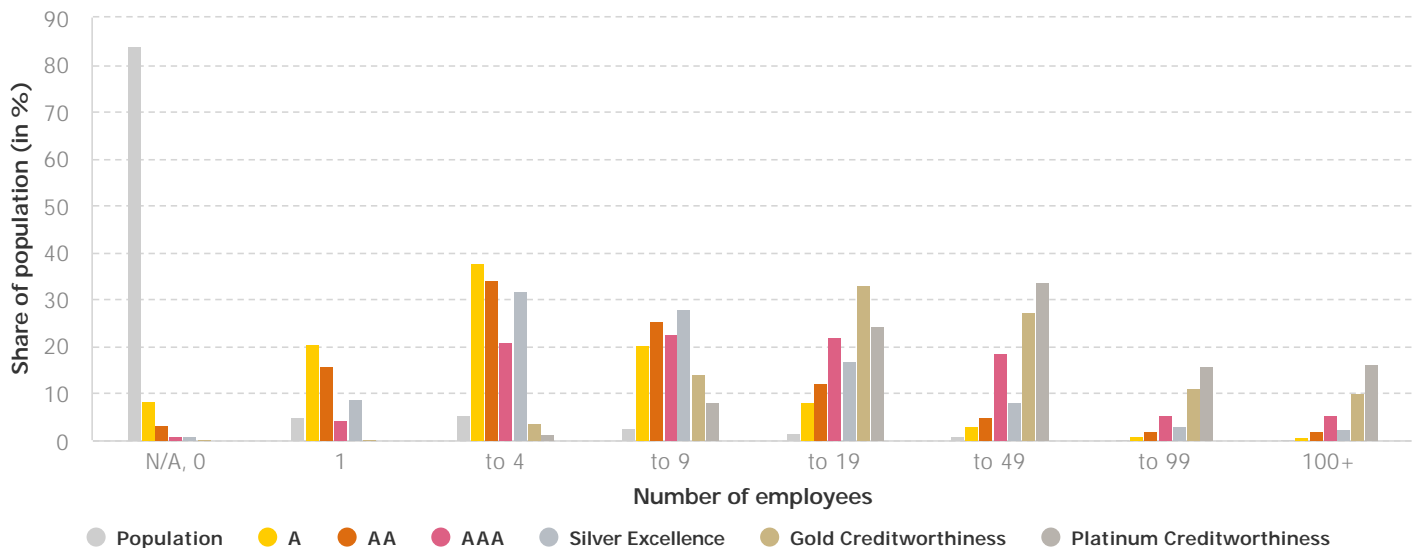

Comparison of the distribution of business entities according to their age reveals that the majority of them achieve creditworthiness rating AAA after the 15th year of business performance.

Distribution by age

Comparison of the distribution of business entities with the creditworthiness rating AAA according to their size reveals that the majority of them are among organizations with up to 9 employees.

Distribution by number of employees

Comparison of the distribution of business entities with the creditworthiness rating AAA according to their revenues reveals that the majority of them achieve revenues up to half a million EUR.

Distribution by income
